

Few days before Christmas 2024, ATAG signed the formal agreement to become the Sole Shareholder with management power over the company COFI Srl.

Who is COFI Srl?

COFI Srl is a prominent company operating for over thirty years in the industrial sector, including naval, transportation, steel, paper, energy, and chemical industries. It has become a trusted leader for steel mills, foundries, rolling mills, pickling plants, electrolytic tinning, blast furnaces, continuous casting, regeneration systems. However, it is in the naval sector that the company has deservedly earned an outstanding reputation, with over 100 naval units equipped with solutions designed and manufactured by **COFI Srl**.

COFI Srl performs a wide range of services on site, such as:

- disassembly, replacement, assembly and refitting of its own products;
- installation of special seals, such as aircraft elevators platforms seals in aircraft carriers;
- installation of custom seals and bellows in standard or niche applications;
- installation of complex flexible systems tailored to specific requirements.

COFI Srl carries out a constant research and development activity in order to provide highly reliable and technologically advanced content products, applications and installations.

COFI Srl is able, through its meticulous and innovative design abilities, to develop special items according to customer requirements or ground up solutions.

To address customers' needs, **COFI Srl** deals with products such as:

- thermoplastic, rubber, or metal hoses, as well as composite hoses with anti-pullout connection systems;
- rubber, metal, and textile compensator joints, with or without flame protection;
- sealing rings, gaskets, and customized solutions based on clients designs or engineered from the ground up.

In the naval sector, components and materials supplied are all RINA-certified.

COFI Srl independently assembles most piping systems using a radial hydraulic hose crimping machine in all hydraulic hoses up to 4". Additionally, **COFI Srl** has its own testing chamber for hydrostatic high-pressure tests and a safety cell for bursting tests.

The traceability is part of the care for safety that **COFI Srl** puts in the manufacture of all its products: an identification tag in aluminum, brass or stainless-steel is engraved in every article.
